How CGRP antagonists stop migraine attacks

A new class of drugs will help prevent migraines by interrupting a critical chemical pathway

1. Migraine begins deep in the brain.
How CGRP antagonists stop migraine attacks

A new class of drugs will help prevent migraines by interrupting a critical chemical pathway

1. Migraine begins deep in the brain.
2. Additional brain regions affected by electrical impulses.
How CGRP antagonists stop migraine attacks

A new class of drugs will help prevent migraines by interrupting a critical chemical pathway

1. Migraine begins deep in the brain.
2. Additional brain regions affected by electrical impulses.
3. Early symptoms begin due to activated nerve cells and increased blood flow.
