

Health care intelligence sparks brilliant solutions.

OPTUM IQ™

OptumIQ™ powers intelligence across the health care system and is infused into all our products and services. It represents our unique combination of data, analytics and health care expertise.

Advancements in technology are revolutionizing how health care operates. In fact, 30 percent of the world’s stored data is generated in health care, yet many organizations lack the experience and tools to realize the full potential of available information.¹

Making data possibilities a reality

Managing the volume of data across multiple formats, including unstructured information, and an ever-growing range of sources, makes it difficult to extract insights that inform the next best action and drive higher performance. Stakeholders across the industry want relevant information at their fingertips to improve how they access, manage and pay for care and therapies. Augmenting human understanding with technology is positioned as the way of the future. But health care needs practical solutions that can solve today’s demands.

Data. Analytics. Expertise.

Optum is staying ahead of the developing story around artificial intelligence, ignoring the hype and incorporating the major advantages of natural language processing, machine learning, deep learning and rules-based models. Because we lead from within the health care industry, our 25,000 data and analytics experts, combined with multidisciplinary teams of clinicians, actuaries and researchers, ensure that our solutions keep pace with the continuous changes in consumer demands, government regulations and market expectations unique to health care. We listen and learn from our clients, understanding what works and why, and incorporate findings from the field into our body of knowledge.

Optum® is bridging the gap

The right investments for today and beyond

\$3.6B+
invested
annually in technology and innovation

120+ patents,
covering rules-based models and artificial intelligence systems designed for health care

~240M
lives of deidentified clinical and claims data that provides experts an accurate environment in which to build new analytics

~25,000
data scientists
clinicians, health economists, technologists, and other skilled professionals working collaboratively.

How it works

OptumIQ™ is at the epicenter of the health care system, powering health care intelligence for a modern world. By combining, refining, validating and continually enriching billions of data points from across the system, Optum solutions provide a comprehensive view while delivering dynamic and multi-dimensional insights that get smarter every day.

Our innovations in AI provide tangible solutions because they are made by experts, for experts. Our practicing technologists, data scientists, actuaries and clinicians use insights to create advanced analytics that anticipate change and guide action in ways others simply can't envision.

HEALTH CARE INTELLIGENCE

Population Analytics | Advocacy and Care Management | Pharmacy Care Services
Risk, Quality and Network Solutions | Payment Integrity | Revenue Cycle Management
Life Sciences Data and Tools | Advisory Services

CLIENTS WE SERVE

Employers, Government, Health Plans, Life Sciences,
Providers, Individuals and Families

CURATED DATA

Build a common language.

We start by integrating disparate data sources from across the health care system. Embedded in this curation process are steps to standardize and link the data at a person level, so that we can create a comprehensive view of quality, cost, access and satisfaction at both an individual and population level. Although the size of our data assets is impressive, it's the enrichment and curation that make them unparalleled in the industry.

LEADING ANALYTICS

Innovate with purpose.

We apply metrics and measures that look for patterns in quality and outcomes, consumer behavior; cost, risk and utilization; and operational performance to transform data into insights. Our library of analytic building blocks has been fine-tuned for 20 years and our multi-disciplinary team of experts update it constantly, so it reflects industry best practices, changing regulations, and technology advancements, such as artificial intelligence.

APPLIED EXPERTISE

Guide action for success.

Combining highly curated data and industry-leading analytics with our domain expertise in health care enables us to move our clients along the analytics maturity curve, from traditional models to artificial intelligence. Our teams of applied experts and analytics platforms yield insights that explore what will happen in the future, so our clients can take the right action today.
