Simplify, optimize, modernize and integrate your application portfolio

Leverage operational processes and methodologies to manage the entire application portfolio and lifecycle

Portfolio rationalization, optimization and management that decreases ongoing operating costs and increases the business value of applications.

Optum now offers clients the ability to leverage facets of one of the industry's most comprehensive application management solutions designed exclusively for health care. Our application management services encompass the following offerings.

- **Application rationalization:** Short-, medium- and long-range planning and execution of the optimal enterprise application portfolio

- **Application support:** Tier 2/3 applications incident response and ongoing application maintenance

- **Integrated testing:** Lifecycle test management and execution for third-party applications

- **API management and integration:** Build, manage, monitor, secure and scale APIs and integrations

Benefits of Optum Application Management Services:

- Modernize and reduce portfolio complexity and management

- Reduce incident volumes through proactive prevention and response protocols

- Enable connectivity, data sharing and execution through APIs and integrations

72%

of all apps are expected to be net-new, production-grade cloud-native apps by 2024[1]

1. IDC FutureScape: Worldwide IT Industry 2022 Predictions.

To digitally transform health care, Optum IT Performance as a Service (ITPaaS) helps organizations:

- Power cloud transformation
- Improve their security posture
- Accelerate application development and technology modernization
- Optimize and manage infrastructure and core systems

The "As a Service" consumption model delivers health care-specialized, scalable services in four areas: cloud, security, application development and applications management.

As a health care leader, we drive innovation and our own business by ongoing, substantial investments in technology and continued optimization of critical processes. Our ITPaaS offering extends these same capabilities to you.

66%

of providers say app modernization and migration is a key part of their app management strategy[2]

....

35%

of IT leaders feel their organizations manage the app portfolio very well or extremely well[2]

2. Optum in-depth interviews.

Optum recently entered a partnership with John Muir Health to rapidly align, modernize and optimize their information technology services. In the first year, the partnership yielded **over 300 IT-supported software and applications.**
